This workbook is for **educational and informational purposes only**. It does not constitute and should not be construed as financial or investment advice, or an offer to purchase or sell securities. The content is not personalized or tailored to any specific individual or their personal investment or financial needs.

All investments involve risk, including the loss of principal. You should consult a qualified financial adviser or other investment professional authorized to provide investment advice before making any investment decisions. Past performance is not indicative of future results.

Presentations of trades, stock examples, and returns referenced in this workbook are historical illustrations used for educational purposes. They are not a guarantee that any investment decision will be successful. Testimonials and examples are not typical of all users. Earnings are not guaranteed and individual results will vary depending on starting capital, time commitment, market conditions, and skill level. Many investors do not profit, and some lose money.

This workbook is **FTC compliant**. No buy or sell ratings are provided. No specific price targets are given. The educational frameworks presented herein are intended to help readers develop their own analytical skills and should not be interpreted as recommendations to take any specific investment action.

Stock performance is highly volatile. Any examples of successful outcomes are illustrative and are not representative of typical or average investor performance.

ABOUT THE AUTHOR

Felix Prehn & Goat Academy

Felix Prehn is a former investment banker. He gained deep insights into the strategies and principles that professional investors use to build and protect wealth.

Goat Academy

Felix Prehn is the founder of Goat Academy, an educational platform that has taught over 20,000 students the fundamentals of investing and stock market analysis. Goat Academy focuses on demystifying Wall Street's investment strategies and making them accessible to regular investors.

The academy provides comprehensive training on fundamental analysis, technical analysis, risk management, and portfolio construction — empowering individual investors to make informed decisions about their financial futures.

Tradevision.io

Felix Prehn is also the co-founder of Tradevision.io, a platform dedicated to providing

news and data specifically tailored for retail investors. Tradevision.io helps individual investors access the information and tools they need to compete effectively in modern financial markets.

Mission & Dedication

Felix Prehn has dedicated his retirement to teaching regular investors how to protect their wealth and navigate the complexities of the stock market. His approach emphasizes understanding the fundamental principles that drive long-term investment success, rather than chasing short-term trends or speculation.

By bridging the knowledge gap between Wall Street professionals and individual investors, Felix works to level the playing field and help people take control of their financial destinies.

SECTOR: AEROSPACE & SPACE INDUSTRY

The Greatest Stock Market Opportunity Before the SpaceX IPO

Understanding Risk and Opportunity — Before the Most Anticipated IPO in History

Analyst: Winston | Report published June 2026

EXECUTIVE SUMMARY

BOTTOM LINE: Every generation gets an "IPO of the decade," and the crowd that chases it usually gets hurt the most. Facebook, Snap, Uber, Coinbase, and Rivian all followed the same pattern — massive hype, then massive losses for anyone who bought on day one without a system. With SpaceX (and potentially Anthropic) approaching public markets at valuations exceeding \$200 billion, the same trap is setting up again. But here is the good news: in every single one of those moments, a small group of investors made a fortune — because they had a system. This workbook teaches you the three simple rules — the "Power Moves" — that Wall Street professionals use to tell the difference between a stock they should own and one they should avoid. These are the same rules that every crashed IPO in history broke. Learn them, and you will never have to guess again.

SECTION 1 — THE IPO TRAP: WHY THE CROWD GETS HURT

The Pattern That Repeats Every Time

Think about the biggest IPOs in history. These were supposed to be the "can't-miss" stocks.

Every news channel covered them. Your friends talked about them. Everybody wanted in on day one. And here is what actually happened:

IPO	WHAT HAPPENED AFTER LISTING	THE LESSON
Facebook	Cut in HALF in four months	Even the best business can crush you at the wrong entry
Snap	Down 72% from IPO price	The "next Facebook" label is a trap
Uber	Underwater for ~3.5 years	Famous brands can be dead money for years
Coinbase	Down 87% from listing	When everyone already owns it, who is left to buy?
Rivian	Popped +130%, then fell 89%	The quick pop is a trap before the collapse

"Every generation gets its IPO of the decade. The crowd that chased it got carried out."

What Did They All Have in Common?

Every single one of these stocks broke all three of Wall Street's rules. They did not have institutional buying support. They did not show the heartbeat pattern. And they did not have the

profit growth to back up the hype. Today, you learn those three rules so you can tell the difference before you put your money at risk.

Why This Matters Now

When SpaceX finally lists, the crowd will pile in at the top. Most people will be a year or two early — or buying the wrong ticker entirely. The goal of this workbook is to make sure you are not one of them.

SECTION 2

The SpaceX Effect: What Happens When Giants Enter the Index

What Nobody Is Talking About

Here is something most investors have never thought about. When a company like SpaceX or Anthropic goes public at a valuation above \$200 billion, something mechanical happens behind the scenes that affects *every single stock you own*.

When a giant company joins a major index (like the S&P 500), every index fund on earth is **forced to buy it**. Index funds must hold every stock in the index, weighted by size. So when a

\$200 billion company joins, the funds need to find \$200 billion worth of cash.

Where does that cash come from? They **trim every other holding you own** to fund it.

This Already Happened — Remember Tesla

In December 2020, when Tesla was added to the S&P 500, index funds sold approximately \$50 billion of the other 499 stocks to make room. Now imagine scaling that up for SpaceX, which could be even larger.

Key Teaching Point: When a new giant enters an index, three things happen:

- **Mega-caps barely notice.** The biggest dollar amount gets sold from Apple, Nvidia, etc. — but they trade billions a day and absorb the selling easily.
- **The stock kicked OUT takes the hit.** A 100-stock index stays at 100 — add one, eject the weakest. That stock gets fully liquidated.
- **Thin, low-volume stocks get hurt the most.** The same forced sale represents days of their normal volume — small dollar amount, big price impact.

Weak relative strength + no volume = vulnerable. This is the exact opposite of the three rules you are learning today.

What This Means for You

If you hold stocks with weak performance and low trading volume when SpaceX or Anthropic joins a major index, those positions could face selling pressure that has nothing to do with the company's fundamentals. Understanding this mechanical force is part of being a prepared investor.

SECTION 3

The Opportunity Hidden Inside the Chaos

In Every Crash, Someone Made a Fortune

Here is the part most people miss. In every single one of those painful IPO moments — Facebook, Coinbase, Rivian — a small group of investors made a fortune. The difference? They had a system.

There are two ways fortunes were made in these situations:

Way #1: Buy the Survivor

Sometimes the same stock that crashed eventually becomes the biggest winner. Facebook, for example, fell 54% from its IPO

price. But from that panic low, investors who bought at the bottom eventually saw a 30-bagger (a 3,000% return). The key is that they did not buy on hype — they waited until the stock showed the right signals.

Way #2: The Play Nobody Was Watching

The biggest gains are not always in the famous name. Often, they are in the unglamorous company right next to it — the one the crowd ignores. While everyone is focused on the headline IPO, the real money-making opportunity may be in a supplier, a partner, or a related company that is already publicly traded and already showing strong fundamentals.

Key Teaching Point: The crowd focuses on the headline name. Smart investors look at the ecosystem around it. The space industry is not just SpaceX — it is an entire supply chain of companies that build rockets, satellites, launch infrastructure, and space technology. Some of these are already public, already profitable, and already showing the signals the three Power Moves look for.

The Lesson

Do not chase the hype. Instead, learn to identify which stocks — whether they are the famous

name or the quiet one next to it — are showing the three signals that professional investors look for. That is what the rest of this workbook teaches you.

SECTION 4

Follow the Money: The Core Philosophy

The Most Important Lesson in Investing

Here is what nobody tells you: If you buy the greatest business in the world, and Wall Street sells it with their billions of dollars, **you will lose money**.

You could research everything. You could analyze the fundamentals until your eyes bleed. And you can still lose money. Not because it is a bad business — but because Wall Street is selling it.

"That's actually all that really matters: Are they buying it, or are they selling it? And who are 'they'? The people with all the money."

What Is "Following the Money"?

Following the money means tracking the quantity of institutional buying. It is not about predicting

the future. It is not about timing the market. It is about observing what the biggest, most informed investors in the world are actually doing with their money right now.

The Simple Rule:

- Is institutional buying **increasing?** → Get in.
- Is institutional buying **decreasing?** → Stay out.

That simple.

Why This Works

The more Wall Street buys, the easier it is to make money. The earlier you catch the buying, the bigger your potential gains. Beyond that, it is just math. When billions of dollars are flowing into a stock, the price tends to go up. When

billions are flowing out, the price tends to go down. Following the money is not guessing — it is observing.

This Is NOT Timing the Market

There is an important distinction here. This is not trying to predict tops and bottoms. This is

following institutional money. Big difference. You are not trying to outsmart the market. You are simply asking: "Where are the biggest investors putting their money right now?" and positioning yourself accordingly.

Money Does Not Lie

People lie. Headlines lie. Predictions lie. But money does not lie. When a hedge fund or mutual fund moves billions of dollars into a stock, that is a real commitment. They have done the research. They have run the models. And they are backing it with real capital. Following their lead is the foundation of everything you are about to learn.

SECTION 5

The 3 Power Moves

These are the three checks that separate professionals from amateurs. The difference between hoping a stock goes up and *knowing* it has the right conditions. Every crashed IPO in history broke all three of these rules. Learn them, and you will never have to guess again.

INSTITUTIONAL BUYING

Follow the Smart Money

What it is: Institutional buying means that the biggest investors in the world — hedge funds, mutual funds, pension funds, banks — are actively buying shares of a stock. These are the "people with all the money."

How you spot it: You look at the **volume**. Volume is the number of shares traded on any given day. When you see a big spike in volume — much larger than normal — that usually means institutional money is moving in. Regular people do not trade millions of shares in a day. Only big institutions do.

Think of it like this: Imagine a quiet neighborhood where one or two houses sell each month. Suddenly, a billionaire starts buying every house on the block. You would notice, right? The "volume" of house sales would spike. That is what an institutional volume spike looks like on a stock chart.

Why it matters: When you see big volume spikes on *up* days (days when the price goes up), that is a signal that smart money is accumulating the stock. They are building a position. And when the smartest, most well-resourced investors in the world are buying, it usually means they know something positive is coming.

The rule: Look for stocks where volume is increasing on up days. That tells you institutional money is flowing in.

Volume = Big Money. You cannot fake volume. When millions of shares trade hands in a single day, that is real money changing hands. Volume is the fingerprint of institutional activity.

THE HEARTBEAT PATTERN

The Rhythm of Money

What it is: The heartbeat pattern is a specific way a stock's price moves over time that tells you healthy, sustained buying is happening. Think of it like a heartbeat on a hospital monitor — a steady, rhythmic pattern that says "this patient is alive and healthy."

How it works: A healthy stock does not go straight up. It moves up, pulls back a little, moves up again, pulls back a little, and keeps repeating. Each new high is higher than the last one. Each pullback is shallow and controlled. This creates a staircase-like pattern on the chart.

Think of it like this: Imagine climbing stairs. You take a step up, pause, take another step up, pause. That is healthy. Now imagine someone running straight up a wall — that is not sustainable and they will fall. A stock that goes straight up without pausing is often about to crash. The heartbeat pattern is the steady staircase climb.

Why it matters: The heartbeat pattern tells you that the stock is being accumulated slowly and steadily by smart money. They are not panic-buying everything at once. They are methodically building their position, which creates a sustainable uptrend.

What to watch for:

- **Higher highs:** Each peak is higher than the last one
- **Higher lows:** Each pullback stops at a higher level than the previous pullback
- **Controlled pullbacks:** The dips are small and orderly, not violent crashes
- **Volume confirmation:** Volume tends to increase on the up moves and decrease on the pullbacks

The rule: Look for stocks that are "climbing the stairs" — steady, rhythmic moves higher with controlled pullbacks. Avoid stocks that are going straight up (unsustainable) or moving sideways with no direction.

The heartbeat pattern is the visual fingerprint of institutional accumulation. When you see it, smart money is building a position methodically.

THE RECORD QUARTER

The Catalyst

What it is: The record quarter means the company is reporting its best-ever financial results. Revenue (the money coming in) or profits (the money kept after expenses) are hitting all-time highs. The company is not just growing — it is growing faster than it ever has before.

How you check it: Every publicly traded company reports its financial results four times a year (each quarter). You look at those reports and ask one simple question: **"Is this a record?"** Is the revenue higher than any previous quarter? Are the profits higher than any previous quarter?

Think of it like this: Imagine two lemonade stands. One sold 10 cups last week and 8 cups this week — it is going backward. The other sold 10 cups last week and 15 cups this week — a new record. Which one would you rather invest in? The one breaking records, of course.

Why it matters: When a company reports record profits, it gives institutional investors a reason to buy more. It confirms that the business is strong and getting stronger. This is the **catalyst** — the trigger — that often sends a stock significantly higher.

What to look for:

- **Record revenue:** The company is bringing in more money than ever before
- **Record profits (earnings):** The company is keeping more money than ever before
- **Accelerating growth:** Not just growing, but growing faster each quarter

The rule: Look for companies that are posting record quarters. You "record check" every earnings report. If the numbers are setting new highs, that is a powerful signal.

All Three Must Align: The real power comes when all three Power Moves line up together. Institutional buying (volume) is increasing. The heartbeat pattern is present (steady staircase climb). And the company is posting record quarters (profit growth). When all three align, you have the conditions that historically precede the biggest stock moves.

SECTION 6

Could You Have Known? Historical 10X Examples

One of the most powerful lessons from the webinar is this: the biggest winners in the stock market were not random. They showed the three Power Moves *before* their massive runs. Wall Street knew. The question is whether regular investors had the training to see it too.

STOCK	RETURN	\$10,000 INVESTED =
Axon	+68,631%	\$6,863,100 profit
NVIDIA	+19,945%	\$1,994,500 profit
Tesla	+16,475%	\$1,647,500 profit
AMD	+7,586%	\$758,600 profit
Shopify	+4,935%	\$493,500 profit
Celsius	+4,700%	\$470,000 profit
Palantir	+2,800%	\$280,000 profit
Rocket Lab	+1,280%	\$128,000 profit

Past performance is not a guarantee of future results. These examples illustrate historical outcomes and are not representative of typical investor performance. Individual results will vary.

What These Winners Had in Common

Every single one of these stocks showed all three Power Moves before their massive runs:

- 1. **Institutional buying** was increasing — big volume spikes on up days showed that smart money was accumulating
- 2. **The heartbeat pattern** was present — the stock was climbing the stairs, not spiking

straight up

- 3. **Record quarters** were being posted — the companies were growing profits faster than ever

The stocks ranged from a "dead" buy-now-pay-later company, to an obscure rocket stock, to a car company, to a government AI contractor. They came from completely different industries. But they all showed the same three signals.

"Wall Street knew. The question is whether YOU had the training to see it."

SECTION 7

The Three Levels of Mastery

Felix teaches that learning to invest is like learning any other skill — it happens in stages. You would not expect to become a surgeon by watching a YouTube video. Investing is no different. There are three levels:

LEVEL	WHAT IT IS	WHAT YOU GET
Level 1: Foundation	Free content — YouTube videos, blog posts, introductory webinars	Motivation and introduction to core concepts. You learn that a better way exists.
Level 2: Application	This webinar and workbook	The actual rules. The actual system. The 3 Power Moves. The process for deciding when to buy and when to stay out. You learn <i>what</i> to do.
Level 3: Mastery	Coaching, community, and real-time market experience	The nuances, the exceptions, the experience-based judgment. You learn <i>how</i> to do it consistently in real markets, with real money, under real pressure.

Where You Are Right Now

By reading this workbook, you are at Level 2. You now have the actual rules that professional investors use. You understand institutional buying, the heartbeat pattern, and the record quarter. This is more than most retail investors ever learn.

The Gap Between Knowledge and Mastery

Knowing the rules and being able to apply them under pressure are two very different things.

Every great investor in history had a mentor:

- **Warren Buffett** learned from Benjamin Graham
- **Peter Lynch** learned from the Fidelity Masters
- **Carl Icahn** learned from Dreyfus Corporation

None of them were born knowing how to invest. They learned from someone who had already done it. And that learning — the mentorship, the guided practice, the real-time feedback — is what took them from knowing the rules to mastering them.

"Warren Buffett wasn't born a genius investor. He learned from someone. Which means YOU can learn it too."

The Skill Wall Street Guards

Wall Street keeps investing complex on purpose. It benefits them when regular people feel

confused and overwhelmed. But the truth is simple. The three Power Moves are simple. What you need is the practice, the guidance, and the community to apply them consistently.

SECTION 8

The Math of a Life: Why This Matters

Your Money Is Your Life

The average American spends 40 to 50 years working. 40 to 60 hours a week. Saving carefully.

Building slowly. That money in your portfolio is not just numbers on a screen. It is Monday mornings. Late nights. Missed weekends. It is your life, converted into numbers on a screen.

"Most people spend more time researching a vacation than managing the wealth it took them 30 years to build. Not because they don't care — but because nobody ever taught them the rules."

The Uncomfortable Truth

When you retire or when you start investing your savings, nobody hands you a manual. They hand you the keys and wish you luck. The financial industry is set up to sell you products, not to teach you skills. And the result is that millions of hardworking people watch their savings disappear in market downturns because they never learned the basic rules of the game.

Why the Space Opportunity Matters

The space industry represents a potential generational investment opportunity — the kind that comes along once in a decade. But generational opportunities only create wealth for people who have the skills to identify them properly and manage their risk. Without those

skills, the same opportunity that makes one person wealthy can devastate another.

What You Now Have

In just the time it took to attend the webinar and read this workbook, you have gained:

- The 3 Power Moves that separate professional investors from amateurs
- The ability to **read** the market instead of **guess**
- A foundation that is simple, powerful, and proven
- The confidence to take control of your financial future

The question is no longer whether these skills exist. You now know they do. The question is what you are going to do with that knowledge.

SECTION 9

Your Action Steps

Here is your practical checklist. These are the concrete steps you can take right now to start applying what you have learned.

Step 1: Review Your Current Holdings

- ☐ Open your brokerage account and list every stock you own
- ☐ For each stock, pull up a chart and look at the volume bars at the bottom
- ☐ Ask: "Is volume increasing on up days?" (Power Move #1)
- ☐ Ask: "Is the stock climbing the stairs — higher highs, higher lows?" (Power Move #2)
- ☐ Ask: "Is the company posting record quarters?" (Power Move #3)

Step 2: Apply the 3 Power Moves

- ☐ For each stock, note how many of the 3 Power Moves are present
- ☐ All 3 present = strong conditions
- ☐ 1 or 2 present = proceed with caution
- ☐ 0 present = understand the risk you are taking

Step 3: Research the Space Ecosystem

- ☐ Identify publicly traded companies in the space industry supply chain
- ☐ Apply the 3 Power Moves to each one

- ☐ Remember: the biggest gains are often in the "unglamorous company right next to" the famous name

Step 4: Prepare for the SpaceX IPO

- ☐ Understand the index rebalancing effect (Section 2)
- ☐ Review which of your current holdings could be vulnerable to forced selling
- ☐ Do NOT plan to buy any IPO on day one — wait for the 3 Power Moves to confirm

Step 5: Set Up Your Tools

- ☐ Use a charting platform that shows volume data clearly
- ☐ Set up alerts for volume spikes on stocks you are watching
- ☐ Track quarterly earnings reports for the companies on your watch list

Step 6: Continue Your Education

- ☐ Watch Felix's free content on YouTube (youtube.com/felixfriends)
- ☐ Consider whether you are ready to move from Level 2 (Application) to Level 3 (Mastery)
- ☐ Book a free strategy call to discuss your personal situation

SECTION 10

Your Next Step

The Difference Between Knowing and Doing

You now have the three rules. You know what institutional buying looks like. You know what the heartbeat pattern is. You know how to record-check a company's quarterly earnings. This puts you ahead of the vast majority of retail investors.

But there is a difference between knowing the rules and being able to apply them confidently in real time, with real money, when emotions are running high and the market is moving fast.

Every Investor Faces a Moment

Every investor will face a moment where the market turns against them. The question is not *whether* it will happen — it is whether you will have the skills to respond. Will you freeze and hope? Or will you have a plan?

Goat Academy teaches you how the professionals manage risk — so you can face those moments with a plan, not a prayer.

One Conversation Can Change Everything

If you are ready to take the next step — if you want to move from Level 2 to Level 3, from knowing the rules to mastering them — it starts with just one conversation.

Book Your Free Strategy Call

Speak with the Goat Academy team about your personal investing goals and learn how the same rules, frameworks, and thinking used by Wall Street professionals can be applied to your portfolio.

justoneconversation.com

*"The same thinking. The same rules. The same frameworks.
Wall Street has used them for decades. Now applied to you."*
